

FIRE WINDOWS

EAB's robust fire windows prevent the spread of fire, smoke and high temperatures.

Built to last.®

FACTS

EAB's fire windows are made of solid glass in a flexible and stable profile system with smooth inner and outer sides and no visible joints. Cutting and assembly takes place with great accuracy.

Fire classification

EAB's fire windows meet the Swedish building regulation requirements and are type approved by SITAC with respect to fire protection. Fire classifications: E 30, E 60, EI 30, EI 60 and EI 90.

Glazing

Takes place in accordance with the applicable requirements for the relevant class.

Design

We manufacture your fire windows, so they meet your specific needs and in accordance with the drawings that you have approved.

Surface treatment

The surface treatment consists of sandblasting, priming and a finishing layer with a two-component wet coating. The number of paint layers is governed by your environmental classification requirements and the surface evenness of each visible weld seam is checked.

Delivery and installation

When delivered, detailed instructions for self-installation are included.

Choose a colour that matches your profile.

FLEXIBLE

EAB's fire windows are made of solid glass in a flexible and stable profile system. We manufacture your fire windows, so they meet your specific needs and in accordance with the drawings that you have approved.
